

Keeping the community at the heart of what we do

We know this project means a lot to Somerset, and we want to keep you informed and involved. That's why we're launching a series of community consultation sessions in early April to present our latest plans, including:

- **The proposed new ring road design**
- **First phase building adaptations**
- **How you can have your say on the changes**

Consultation events will be taking place soon, look out for more details and follow our WhatsApp channel by scanning the QR code here:

Looking ahead, we're also planning more engagement events with our partners, including:

- **Another Supplier Engagement Day on Tuesday 4 March**
- **The launch of our careers fairs later this year**
- **Additional opportunities for you to meet us, share your feedback, and stay informed**

Our multi-billion-pound investment in Somerset will transform the local economy, create thousands of jobs, and help to cement the UK's place as a leader in sustainable battery technology. We are incredibly grateful for the support of the local community and look forward to continuing to work together to bring our vision to life.

An Update on our Plans: Pioneering the Future of Battery Manufacturing in Somerset

Since breaking ground at the Gravity site, we've made incredible progress in bringing the UK's largest and most advanced battery manufacturing facility to life. We're dedicated to building a lasting, positive impact for Somerset and the wider region.

What we've achieved so far:

First phase construction progress - piling for the first phase of the build is complete, and work to connect the facility to power and utilities is well underway.

New site entrance - we've opened a new dedicated site entrance to improve road access and reduce traffic on other roads.

Support for local businesses - our Supplier Engagement Day welcomed hundreds of local businesses looking to be part of our supply chain.

On-site facilities - we've introduced new local catering services for our construction workforce, ensuring teams are well-supported while on site.

New site offices - additional site cabins have been installed to support our growing on-site teams and operations.

Investing in skills - we're working closely with Bridgwater & Taunton College and Somerset Council to develop training programmes for young people and people looking to retrain.

Building smarter, building better

Since we first began developing our site in 2023, battery manufacturing technology has moved fast. To stay ahead, we're making some updates to the first phase of our build.

Through new cutting-edge innovations, we're making our operations more compact and even more efficient. The length of our first building will be shortened (by about 100 metres), meaning we can do more with less, cutting waste and boosting productivity without compromising on our ambition.

To make sure we're building for the future, our timeline is shifting slightly - we're now aiming to complete our first building in 2027. But construction is continuing and this summer, you'll start to see the steel framework going up, bringing our vision to life.
